

Nom : _____

PHYS 9

Final exam	Système solaire
------------	-----------------

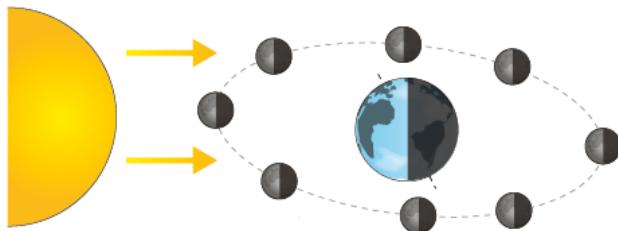

Exercice 1 (3 points) Donnez chaque définition :

Une étoile	Une planète	Un satellite

Exercice 2 (4 points) Cocher les bonnes cases :

	Une étoile ?	Une planète ?	Un satellite ?
a) La terre est...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Le soleil est...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) La lune est...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) Ganymède est...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Exercice 3 (8 points) Numérotez les lunes correctement :

- | | |
|------------------------------|--|
| ① Nouvelle lune | |
| ② Premier croissant | |
| ③ Premier quartier | |
| ④ Lune gibbeuse croissante | |
| ⑤ Pleine lune | |
| ⑥ Lune gibbeuse décroissante | |
| ⑦ Dernier quartier | |
| ⑧ Dernier croissant | |

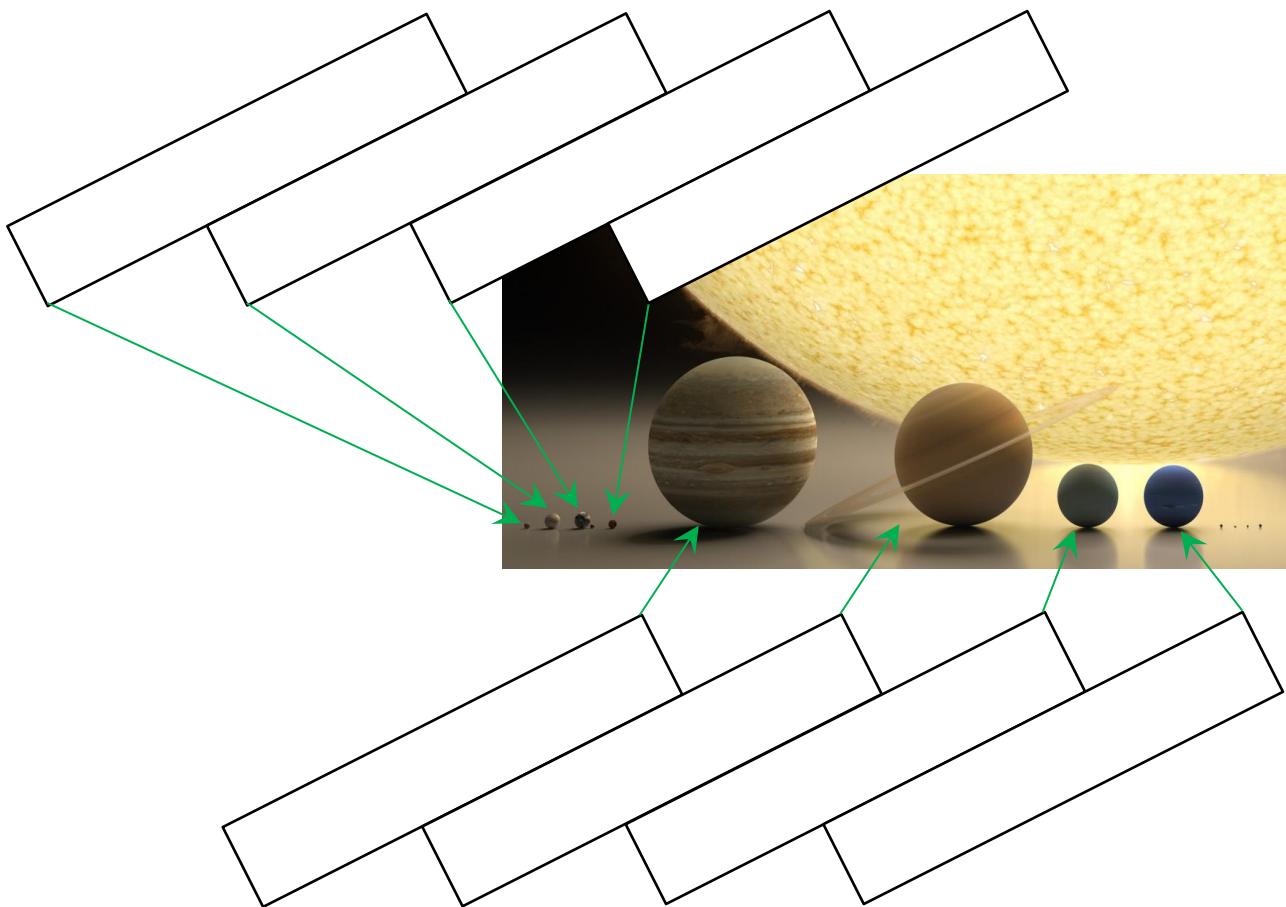

Exercice 4 (6 points)

- a) Knowing that the mass of Jupiter is 2×10^{27} kg, the mass of Ganymed is 1.5×10^{24} kg, and the distance between them is 1 000 000 km, calculate the **force of attraction** that Jupiter exerts on Ganymed.

- b) Calculate by the same way the **force of attraction** that Ganymed exerts on Jupiter.

- c) Knowing that the radius of Ganymed is 5000 km, calculate the **acceleration** at the surface of this satellite.

Exercice 5 (8 points) Give the planets in order from the sun:

Exercice 6 (1 point) What is the best illustration of the distances between the planets?
